This contains everything I learned and applied while making the Excel dashboard

1) Data Cleaning
   - Checking each column to ensure consistency of the data [
       1) The quantity was mentioned as 1,2… and one and two so I replaced it
       2) In the gender column - M and W were mentioned instead of Men and Women in some places so I replaced them]

2) Data Processing[calculations, creating new columns etc to help in analysing data]

   - Formula to calculate age group -
     =IF(E2>=50, "Senior",IF >=30 "Adult","Teenager))"
     [Then copy and paste it as values to prevent the system from slowing down]
   - Formula to calculate month
     =TEXT(G2,"mmm") - will give dec
     =TEXT(G2,"mmmm") - will give december

3) Data Analysis[Creating Pivot Tables]

   - Men Vs Women
   - Top 5 States
   - Order Channels
   - Based on gender and Age
   - Order vs sales
   - Order Status
